NTC Pathfinder Trailer Safety System

The Northern Trailer Company, Reshaping Trailer Safety

Here at The Northern Trailer Company we have taken a step into reducing the ongoing high numbers of falls from height within the transport industry.

The NTC Pathfinder is a patented trailer safety system, which deployed in approximately 5 minutes provides your workforce with a safe, level and effective edge protection walkway system for flatbed trailers and rigid vehicles. Our unique safety system provides users with a practical, effective and time efficient solution to everyday loading and unloading without the need to reduce load size.

The NTC Pathfinder is a deployable system fitted to the trailer, meaning there is no need for additional access equipment, meaning loads can be delivered to various sites including ones with restricted access.

Unlike other safety systems on the market such as soft landing bags, clamping or fall arrest systems, as the NTC Pathfinder is a fitted system this means there is no need to transport parts for assembly, eliminating the risk of key parts being lost or misplaced.

Side rails also drop down providing access for fork lift loading and unloading, another unique feature that makes the NTC Pathfinder ideal for all your transportation needs

Product Benefits:

- Additional walkway, no need to reduce load space.
- Safe distance and level with flatbed for easy access.
- Eliminate the risk of falling all together, fall protection rather than fall arrest.
- Easy assembly. no requirement for additional tools e.g. hammers or clamps.
- No need to transport parts such as bean bags, clamping & fall arrest systems.
- Time effective with 1 man set up taking approximately 5 minutes.
- Installed for lifetime of vehicle.
- Allows access to any site with no requirements for access ramps.
- Customised to any flatbed and choice of colours.
- Responsibility owned by you rather than your customer.

You can't afford to ignore safety relating to working at height - Let the NTC Pathfinder protect you!

Step 1 - Trailer arrive on site.

Step 2 - Unlock side arms and pull out from secure trailer position.

Step 3 - Once arms in place drop walkway mesh and secure.

Step 4 - Pull out and secure corner rails to complete all round protection.

Step 5 - Access walkway using ladders supplied.

Step 6 - Carry out loading or unloading tasks.
